REVISION 82 HIGHLIGHTS

Revision 82, dated November 2022, incorporates the following:

Front matter (Cover, Revision Highlights, etc.), has been revised to match this revision.

- APPLICATION INFORMATION CHAPTER
  - Updated application information where applicable throughout the manual.

REVISION 82 HIGHLIGHTS1. Introduction

## A. General

- (1) This is a list of current revisions that have been issued against this manual. Please compare to the RECORD OF REVISIONS page to make sure that all revisions have been added to the manual.
- (2) No change bars are used in the specific application information pages of this manual. Refer to the “Date” field of each individual application entry as an indicator of updated information since the previous published revision.

## B. Components

- (1) Revision No. indicates the revisions incorporated in this manual.
- (2) Issue Date is the date of the revision.
- (3) Comments indicates the level of the revision.
  - (a) New Issue is a new manual distribution. The manual is distributed in its entirety. All the revision dates are the same and no change bars are used.
  - (b) Reissue is a revision to an existing manual that includes major content and/or major format changes. The manual is distributed in its entirety. All the revision dates are the same and no change bars are used.
  - (c) Major Revision is a revision to an existing manual that includes major content or minor format changes over a large portion of the manual. The manual is distributed in its entirety. All the revision dates are the same, but change bars are used to indicate the changes incorporated in the latest revision of the manual.

NOTE: No change bars are used in the specific application information pages of this manual. Refer to the “Rev.” and “Date” fields of each individual application entry as an indicator of updated information since the previous published revision.

- (d) Minor Revision is a revision to an existing manual that includes minor content changes to the manual. Only the revised pages of the manual are distributed. Each page retains the date and the change bars associated with the last revision to that page.

| <u>Revision No.</u> | <u>Issue Date</u> | <u>Comments</u> |
|---------------------|-------------------|-----------------|

**1. General****A. Statement of Purpose**

- (1) The purpose of this publication is to provide a summary of information for existing aircraft applications that use Hartzell Propeller Inc. propellers.
- (2) This publication is compiled and issued by Hartzell Propeller Inc., Piqua, OH.
- (3) This manual is to be used in propeller repair stations by personnel that are trained and experienced with Hartzell Propeller Inc. products.
  - (a) This manual does not provide complete information for an inexperienced technician to attempt propeller overhaul without supervision.
- (4) This manual does not contain propeller or blade overhaul procedures. Refer to the appropriate Hartzell Propeller Inc. manual for propeller or blade overhaul.
- (5) This manual makes reference to other Hartzell Propeller Inc. manuals that provide important details for procedures such as anodizing, penetrant inspection, and overhaul procedures for hub units.
- (6) Where possible, this manual is written in the format specified by ATA iSpec 2200.
- (7) This manual contains an Appendix chapter that is meant to be used as a quick reference to more detailed information contained in the Application Information chapter of this manual.

## 2. Disclaimer

**WARNING:** ANY PART IDENTIFIED IN THIS MANUAL AS AN EXPERIMENTAL OR NON-AVIATION PART MUST NOT BE USED IN AN FAA OR INTERNATIONAL EQUIVALENT TYPE CERTIFICATED PROPELLER. A PART IDENTIFIED AS EXPERIMENTAL OR NON-AVIATION DOES NOT HAVE FAA OR INTERNATIONAL EQUIVALENT APPROVAL. USE ONLY THE APPROVED ILLUSTRATED PARTS LIST PROVIDED IN THE APPLICABLE OVERHAUL MANUAL OR ADDITIONAL PARTS APPROVED BY AN FAA ACCEPTED DOCUMENT FOR ASSEMBLY OF A PROPELLER. THE OPERATOR ASSUMES ALL RISK ASSOCIATED WITH THE USE OF EXPERIMENTAL PARTS. USE OF EXPERIMENTAL PARTS ON AN AIRCRAFT MAY RESULT IN DEATH, SERIOUS BODILY INJURY, AND/OR SUBSTANTIAL PROPERTY DAMAGE.

- A. The information in this publication is FAA accepted technical data. Because the information contained in this document is frequently changing, always consult Hartzell Propeller Inc. service manuals, aircraft and propeller Type Certificates (TC), Supplemental Type Certificates (STC), and/or engineering blueprints for precise and accurate information when determining installation eligibility. If installation eligibility is not identifiable, an additional installation approval, such as a FAA Form 337 field approval or Supplemental Type Certificate may be required. TC and STC holders may change an STC without notifying Hartzell Propeller Inc., and this can result in a change to data or installation eligibility contained in this manual that is not known to Hartzell Propeller Inc.
- B. This publication contains only Placard/Restriction information known to Hartzell Propeller Inc. Although the Placard/Restriction field may be blank you must check for other placards or restrictions required by the aircraft manufacturer or by FAA documents such as Type Certificate Data Sheets, Supplemental Type Certificates, and Airworthiness Directives. Always consult all available sources to verify placards and restrictions that might affect propeller operation.
- C. The approved de-ice boots, anti-icing boot, de-ice kits, and anti-ice kits are supplied for the applications in this manual. Refer to Hartzell Propeller Inc. Propeller Ice Protection System Manual 180 (30-61-80) for approved components of these kits. Hartzell Propeller Inc. Service Letters HC-SL-30-259 and HC-SL-30-260 provide additional listings of approved de-ice and anti-ice components.
- D. Please bring errors to our attention by contacting the Hartzell Propeller Inc. Product Support Department, including the approved source where correct information can be verified.
- E. **Information in all chapters of this manual is subject to change and may not be complete or current.**
- F. This application guide replaces all previous application guide data provided by Hartzell Propeller Inc.

3. Reference Publications

## A. Hartzell Propeller Inc. Publications

- (2) Information published in Service Bulletins, Service Letters, Service Advisories, and Service Instructions may supersede information published in this manual. The reader must consult active Service Bulletins, Service Letters, Service Advisories, and Service Instructions for information that may have not yet been incorporated into the latest revision of this manual.
- (2) In addition to this manual, the propeller owner's manual, the propeller overhaul manual, and one or more of the following publications are required for information regarding specific recommendations and procedures to maintain propeller assemblies that are included in this manual.

| <b>Manual No.<br/>(ATA No.)</b> | <b>Available at<br/>www.hartzellprop.com</b> | <b>Hartzell Propeller Inc. Manual Title</b>   |
|---------------------------------|--|---|
| n/a                             | Yes  | Active Hartzell Propeller Inc. Service Bulletins, Service Letters, Service Instructions, and Service Advisories |
| Manual 127<br>(61-16-27)        | Yes  | Metal Spinner Maintenance Manual  |
| Manual 133C<br>(61-13-33)       | -  | Aluminum Blade Overhaul Manual  |
| Manual 135F<br>(61-13-35)       | -  | Composite Propeller Blade Maintenance Manual  |

## B. Vendor Publications

None.

**4. Personnel Requirements** (Rev. 1)**A. Service and Maintenance Procedures in this Manual**

- (1) Personnel performing the service and maintenance procedures in this manual are expected to have the required equipment/tooling, training, and certifications (when required by the applicable Aviation Authority) to accomplish the work in a safe and airworthy manner.
- (2) Compliance to the applicable regulatory requirements established by the Federal Aviation Administration (FAA) or international equivalent is mandatory for anyone performing or accepting responsibility for any inspection and/or repair of any Hartzell Propeller Inc. product.
  - (a) Maintenance records must be kept in accordance with the requirements established by the Federal Aviation Administration (FAA) or international equivalent.
  - (b) Refer to Federal Aviation Regulation (FAR) Part 43 for additional information about general aviation maintenance requirements.

**5. Propeller Model Designation**

- A. For propeller model designations, refer to the applicable propeller owner's manual.

**6. Aluminum Blade Model Designation**

- A. Refer to Hartzell Propeller Inc. Aluminum Blade Manual 133C (61-13-33) and the applicable propeller owner's manual for aluminum blade model designations.

**7. Aluminum Blade Shank Designs**

- A. Refer to Hartzell Propeller Inc. Aluminum Blade Manual 133C (61-13-33) and the applicable propeller owner's manual for aluminum blade model designations.

**8. Composite Blade Models**

- A. Refer to Hartzell Propeller Inc. Composite Blade Manual 135F (61-13-35) and the applicable propeller owner's manual for composite blade model designations.

9. Propeller Critical Parts (Rev. 1)

## A. Propeller Critical Parts

- (1) Procedures in this manual may involve Propeller Critical Parts (PCP).
  - (a) These procedures have been substantiated based on Engineering analysis that expects this product will be operated and maintained using the procedures and inspections provided in the Instructions for Continued Airworthiness (ICA) for this product.
  - (b) Refer to the Illustrated Parts List chapter for the applicable Hartzell Propeller Inc. maintenance manual to identify the Propeller Critical Parts.
- (2) Numerous propeller system parts can produce an aircraft Major or Hazardous effect, even though those parts may not be considered as Propeller Critical Parts.
  - (a) The operating and maintenance procedures and inspections provided in the ICA for this product are, therefore, expected to be accomplished for all propeller system parts.

10. Hartzell Propeller Inc. Contact Information (Rev. 2)

## A. Product Support Department

- (1) Contact the Product Support Department of Hartzell Propeller Inc. about any maintenance problems or to request information not included in this publication.

NOTE: When calling from outside the United States, dial (001) before dialing the above telephone numbers.

- (a) Hartzell Propeller Inc. Product Support may be reached during business hours (8:00 a.m. through 5:00 p.m., United States Eastern Time) at (937) 778-4379 or at (800) 942-7767, toll free from the United States and Canada.

- (b) Hartzell Propeller Inc. Product Support can also be reached by fax at (937) 778-4215, and by e-mail at [techsupport@hartzellprop.com](mailto:techsupport@hartzellprop.com).

- (c) After business hours, you may leave a message on our 24 hour product support line at (937) 778-4376 or at (800) 942-7767, toll free from the United States and Canada.

- 1 A technical representative will contact you during normal business hours.

- 2 Urgent AOG support is also available 24 hours per day, seven days per week via this message service.

- (d) Additional information is available on the Hartzell Propeller Inc. website at [www.hartzellprop.com](http://www.hartzellprop.com).

## B. Technical Publications Department

- (1) For Hartzell Propeller Inc. service literature and revisions, contact:

|   |  |
|---|--|
| Hartzell Propeller Inc.                 | Telephone: 937.778.4200  |
| Attn: Technical Publications Department | Fax: 937.778.4215  |
| One Propeller Place                     | E-mail: <a href="mailto:manuals@hartzellprop.com">manuals@hartzellprop.com</a> |
| Piqua, Ohio 45356-2634 U.S.A.           |  |

## C. Recommended Facilities

- (1) Hartzell Propeller Inc. recommends using Hartzell-approved distributors and repair facilities for the purchase, repair, and overhaul of Hartzell propeller assemblies or components.
- (2) Information about the Hartzell Propeller Inc. worldwide network of aftermarket distributors and approved repair facilities is available on the Hartzell website at [www.hartzellprop.com](http://www.hartzellprop.com).

11. Definitions (Rev. 4)

A basic understanding of the following terms will assist in maintaining and operating Hartzell Propeller Inc. propeller systems.

| <b>Term</b>           | <b>Definition</b>  |
|-----------------------|--|
| Annealed              | Softening of material due to overexposure to heat  |
| Aviation Certified    | Intended for FAA or international equivalent type certificated aircraft applications. A TC and PC number must be stamped on the hub, and a PC number must be stamped on blades.  |
| Aviation Experimental | Intended for aircraft/propeller applications not certified by the FAA or international equivalent. Products marked with an "X" at or near the end of the model number or part number are not certified by the FAA or international equivalent and are not intended to use on certificated aircraft.  |
| Beta Operation        | A mode of pitch control that is directed by the pilot rather than by the propeller governor  |
| Beta Range            | Blade angles between low pitch and maximum reverse blade angle   |
| Beta System           | Parts and/or equipment related to operation (manual control) of propeller blade angle between low pitch blade angle and full reverse blade angle   |
| Blade Angle           | Measurement of blade airfoil location described as the angle between the blade airfoil and the surface described by propeller rotation   |
| Blade Centerline      | An imaginary reference line through the length of a blade around which the blade rotates   |
| Blade Station         | Refers to a location on an individual blade for blade inspection purposes. It is a measurement from the blade "zero" station to a location on a blade, used to apply blade specification data in blade overhaul manuals.<br><b>Note:</b> Do not confuse <i>blade station</i> with <i>reference blade radius</i> ; they may not originate at the same location. |
| Blemish               | An imperfection with visible attributes, but having no impact on safety or utility   |
| Brinelling            | A depression caused by failure of the material in compression  |

| Term                 | Definition  |
|----------------------|---|
| Bulge                | An outward curve or bend  |
| Camber               | The surface of the blade that is directed toward the front of the aircraft. It is the low pressure, or suction, side of the blade. The camber side is convex in shape over the entire length of the blade.  |
| Chord                | A straight line distance between the leading and trailing edges of an airfoil   |
| Chordwise            | A direction that is generally from the leading edge to the trailing edge of an airfoil  |
| Co-bonded            | The act of bonding a composite laminate and simultaneously curing it to some other prepared surface   |
| Composite Material   | Kevlar <sup>®</sup> , carbon, or fiberglass fibers bound together with, or encapsulated within an epoxy resin   |
| Compression Rolling  | A process that provides improved strength and resistance to fatigue   |
| Constant Force       | A force that is always present in some degree when the propeller is operating   |
| Constant Speed       | A propeller system that employs a governing device to maintain a selected engine RPM  |
| Corrosion (Aluminum) | The chemical or electrochemical attack by an acid or alkaline that reacts with the protective oxide layer and results in damage of the base aluminum. Part failure can occur from corrosion due to loss of structural aluminum converted to corrosion product, pitting, a rough etched surface finish, and other strength reduction damage caused by corrosion.   |
| Corrosion (Steel)    | Typically, an electrochemical process that requires the simultaneous presence of iron (component of steel), moisture and oxygen. The iron is the reducing agent (gives up electrons) while the oxygen is the oxidizing agent (gains electrons). Iron or an iron alloy such as steel is oxidized in the presence of moisture and oxygen to produce rust. Corrosion is accelerated in the presence of salty water or acid rain. Part failure can occur from corrosion due to loss of structural steel converted to corrosion product, pitting, a rough etched surface finish and other strength reduction damage caused by corrosion. |

| Term                         | Definition  |
|------------------------------|---|
| Corrosion Product (Aluminum) | A white or dull gray powdery material that has an increased volume appearance (compared to non-corroded aluminum). Corrosion product is not to be confused with damage left in the base aluminum such as pits, worm holes, and etched surface finish.   |
| Corrosion Product (Steel)    | When iron or an iron alloy such as steel corrodes, a corrosion product known as rust is formed. Rust is an iron oxide which is reddish in appearance and occupies approximately six times the volume of the original material. Rust is flakey and crumbly and has no structural integrity. Rust is permeable to air and water, therefore the interior metallic iron (steel) beneath a rust layer continues to corrode. Corrosion product is not to be confused with damage left in the base steel such as pits and etched surface finish. |
| Crack                        | Irregularly shaped separation within a material, sometimes visible as a narrow opening at the surface   |
| Debond                       | Separation of two materials that were originally bonded together in a separate operation  |
| Defect                       | An imperfection that affects safety or utility  |
| Delamination                 | Internal separation of the layers of composite material   |
| Dent                         | The permanent deflection of the cross section that is visible on both sides with no visible change in cross sectional thickness   |
| Depression                   | Surface area where the material has been compressed but not removed   |
| Distortion                   | Alteration of the original shape or size of a component   |
| Edge Alignment               | Distance from the blade centerline to the leading edge of the blade   |
| Erosion                      | Gradual wearing away or deterioration due to action of the elements   |
| Exposure                     | Leaving material open to action of the elements   |

| Term                       | Definition  |
|----------------------------|---|
| Face                       | The surface of the blade that is directed toward the rear of the aircraft. The face side is the high pressure, or thrusting, side of the blade. The blade airfoil sections are normally cambered or curved such that the face side of the blade may be flat or even concave in the midblade and tip region. |
| Face Alignment             | Distance from the blade centerline to the highest point on the face side perpendicular to the chord line  |
| Feathering                 | The capability of blades to be rotated parallel to the relative wind, thus reducing aerodynamic drag  |
| Fraying                    | A raveling or shredding of material   |
| Fretting                   | Damage that develops when relative motion of small displacement takes place between contacting parts, wearing away the surface  |
| Galling                    | To fret or wear away by friction  |
| Gouge                      | Surface area where material has been removed  |
| Hazardous Propeller Effect | The hazardous propeller effects are defined in Title 14 CFR section 35.15(g)(1)   |
| Horizontal Balance         | Balance between the blade tip and the center of the hub   |
| Impact Damage              | Damage that occurs when the propeller blade or hub assembly strikes, or is struck by, an object while in flight or on the ground  |
| Inboard                    | Toward the butt of the blade  |
| Intergranular Corrosion    | Corrosion that attacks along the grain boundaries of metal alloys   |
| Jog                        | A term used to describe movement up/down, left/right, or on/off in short incremental motions  |
| Laminate                   | To unite composite material by using a bonding material, usually with pressure and heat   |
| Lengthwise                 | A direction that is generally parallel to the pitch axis  |
| Loose Material             | Material that is no longer fixed or fully attached  |
| Low Pitch                  | The lowest blade angle attainable by the governor for constant speed operation  |

| Term                      | Definition  |
|---------------------------|---|
| Major Propeller Effect    | The major propeller effects are defined in Title 14 CFR section 35.15(g)(2)   |
| Minor Deformation         | Deformed material not associated with a crack or missing material   |
| Monocoque                 | A type of construction in which the outer skin carries all or a major part of the load  |
| Nick                      | Removal of paint and possibly a small amount of material  |
| Non-Aviation Certified    | Intended for non-aircraft application, such as Hovercraft or Wing in Ground Effect (WIG) applications. These products are certificated by an authority other than FAA. The hub and blades will be stamped with an identification that is different from, but comparable to TC and PC. |
| Non-Aviation Experimental | Intended for non-aircraft application, such as Hovercraft or Wing-In-Ground effect (WIG) applications. Products marked with an "X" at or near the end of the model number or part number are not certified by any authority and are not intended for use on certificated craft.       |
| Onspeed                   | Condition in which the RPM selected by the pilot through the propeller control/condition lever and the actual engine (propeller) RPM are equal  |
| Open Circuit              | Connection of high or infinite resistance between points in a circuit which are normally lower  |
| Outboard                  | Toward the tip of the blade   |
| Overhaul                  | The periodic disassembly, inspection, repair, refinish, and reassembly of a propeller assembly to maintain airworthiness  |
| Overspeed                 | Condition in which the RPM of the propeller or engine exceeds predetermined maximum limits; the condition in which the engine (propeller) RPM is higher than the RPM selected by the pilot through the propeller control/condition lever  |
| Pitch                     | Same as "Blade Angle"   |
| Pitting                   | Formation of a number of small, irregularly shaped cavities in surface material caused by corrosion or wear   |

| Term                     | Definition   |
|--------------------------|--|
| Pitting (Linear)         | The configuration of the majority of pits forming a pattern in the shape of a line   |
| Porosity                 | An aggregation of microvoids. See “voids”.   |
| Propeller Critical Parts | A part on the propeller whose primary failure can result in a hazardous propeller effect, as determined by the safety analysis required by Title 14 CFR section 35.15  |
| Reference Blade Radius   | Refers to the propeller reference blade radius in an assembled propeller, e.g., 30-inch radius. A measurement from the propeller hub centerline to a point on a blade, used for blade angle measurement in an assembled propeller. An adhesive stripe (blade angle reference tape CM160) is usually located at the reference blade radius location.<br><u>Note:</u> Do not confuse <i>reference blade radius</i> with <i>blade station</i> ; they may not originate at the same point. |
| Reversing                | The capability of rotating blades to a position to generate reverse thrust to slow the aircraft or back up   |
| Scratch                  | Same as “Nick”   |
| Short Circuit            | Connection of low resistance between points on a circuit between which the resistance is normally much greater   |
| Shot Peening             | Process where steel shot is impinged on a surface to create compressive surface stress, that provides improved strength and resistance to fatigue  |
| Single Acting            | Hydraulically actuated propeller that utilizes a single oil supply for pitch control   |
| Split                    | Delamination of blade extending to the blade surface, normally found near the trailing edge or tip   |
| Station Line             | See "Blade Station"  |
| Synchronizing            | Adjusting the RPM of all the propellers of a multi-engine aircraft to the same RPM   |
| Synchrophasing           | A form of propeller sychronization in which not only the RPM of the engines (propellers) are held constant, but also the position of the propellers in relation to each other  |
| Ticking                  | A series of parallel marks or scratches running circumferentially around the diameter of the blade   |

| Term                      | Definition   |
|---------------------------|--|
| Track                     | In an assembled propeller, a measurement of the location of the blade tip with respect to the plane of rotation, used to verify face alignment and to compare blade tip location with respect to the locations of the other blades in the assembly |
| Trailing Edge             | The aft edge of an airfoil over which the air passes last  |
| Trimline                  | Factory terminology referring to where the part was trimmed to length  |
| Underspeed                | The condition in which the actual engine (propeller) RPM is lower than the RPM selected by the pilot through the propeller control/condition lever   |
| Unidirectional Material   | A composite material in which the fibers are substantially oriented in the same direction  |
| Variable Force            | A force that may be applied or removed during propeller operation  |
| Vertical Balance          | Balance between the leading and trailing edges of a two-blade propeller with the blades positioned vertically  |
| Voids                     | Air or gas that has been trapped and cured into a laminate   |
| Windmilling               | The rotation of an aircraft propeller caused by air flowing through it while the engine is not producing power   |
| Woven Fabric              | A material constructed by interlacing fiber to form a fabric pattern   |
| Wrinkle (aluminum blade)  | A wavy appearance caused by high and low material displacement   |
| Wrinkle (composite blade) | Overlap or fold within the material  |

### 1. Application Information

#### A. Data Field Definition

The data in the Application Information chapter of this manual is sorted according to Aircraft Manufacturer. This chapter contains the following installation data:

- IDS NO.: Installation reference identification number
- REV.: Revision level of the IDS
- DATE: Effective date of individual installation information, referenced by IDS NO.

NOTE 1: In lieu of change bars, this date will identify when a change has been made to information contained within an individual installation record.

NOTE 2: The date field on some older installation records may be blank, indicating that the original date of origin is not available.

- MODEL: Aircraft manufacturer, model & trade name of the aircraft. The most commonly associated manufacturer's name is used, for example, aircraft are listed in this guide under "Beech" as opposed to "Raytheon Aircraft Corp."
  - TRADE NAME: Aircraft manufacturer's trade name
  - AIRCRAFT TC/STC NO: Aircraft Type certificate or Supplemental Type Certificate Number with modifier or STC holder name
  - PROPELLER MODEL: Propeller model number
  - PROPELLER T.C: Propeller Type Certificate Data Sheet Number
  - BLADE MODEL(S): Approved blade model(s) number for an installation
- NOTE: An asterisk (\*) and number following the blade model number indicates a specific change in the individual blade model. For information pertaining to a specific blade model, refer to the applicable Blade Overhaul Manual.
- PROPELLER DIAMETER: Propeller diameter or diameter range
  - MODIFIER Supplemental Type Certificate holder
  - ENGINE: Engine manufacturer and engine model

- POWER: Propeller horsepower and max. RPM for application
- PLACARD/RESTRICTIONS: Placard information, restrictions and airworthiness limitations, if applicable
- REF. RADIUS: Propeller reference station (not blade station) for blade angle setup
- REVERSE ANGLE: Reverse blade angle if applicable
- LOW PITCH ANGLE: Low pitch angle or low pitch pickup (Garrett TPE331 and Allison 250-B17 engine installations cannot be set on the propeller assembly, they require low pitch to be set on the aircraft and angles must be obtained from aircraft maintenance or flight manual)
- START LOCK ANGLE: Start lock angle (also previously referred to as high pitch stop for piston engine feathering propellers)
- FEATHER/HIGH ANGLE: High pitch or feather angle
- CWT. ANGLE: Counterweight angle measurement is required only when assembling counterweighted steel hub propellers and is measured with the propeller in full reverse (or low pitch for propellers with no reverse setting). Counterweight angle must be **positive** (0.0° or greater) unless a specific angle is given.  
NOTE: No measurement is required for aluminum hub propellers therefore no setting is given in the Cwt Angle field.
- NON-HPI SPINNER: Non-Hartzell Propeller Inc. Spinner assembly if applicable
- NON-HPI GOVERNOR: Non-Hartzell Propeller Inc. governor model if applicable
- HARTZELL APPROVED ITEMS: A list of all Hartzell Propeller Inc. parts (items) that are approved for a given installation. Refer to the Hartzell Propeller Inc. Approved Items section in this chapter for additional information.

**B. Propeller Part Number**

- (1) The Propeller Part Number (Hartzell Propeller Inc. Approved Items section) contains a unique part number that is applicable to the exact propeller model and blade model number identified in the PROPELLER column. A propeller model, e.g., HC-C2YR-1RF, may have numerous propeller part numbers, e.g., C2R00019, C2R00020 and C2R00021, because of differences in blade angles, blade color, tip stripe, de-ice boot location, counterweights and weight slugs. To depict these differences, a unique propeller part number is assigned in addition to the propeller model number. This part number is a unique part number assigned by Hartzell Propeller Inc. and is for ordering purposes only. These part numbers do not appear on Type Certificate Data Sheets. In most cases, the propeller part number does not include the spinner assembly, and the spinner assembly must be ordered as a separate item.

NOTE: If desired, the propeller may be ordered partially disassembled for shipping purposes. If a partially disassembled prop is to be ordered, please add the letters "KD" to the Propeller Part Number, e.g., C2R00019KD.

- (2) A propeller part number, when applicable, may be used to order the exact propeller and blade model identified in the DESCRIPTION column of the list of Hartzell Propeller Inc. Approved Items.

NOTE: The first time an order is received for a specific application, the new propeller part number is created by the customer support representative and product support.

**C. Propeller Model**

- (1) The propeller model designation shown is normally that which is listed in the FAA Aircraft Type Certificate Data Sheets for that particular application. Consideration must be made for superseded models. For instance, a Type Certificate may specify a HC-82X20-2 propeller, but changes such as conversion from "X" shank to "V" or "MV" are approved by the Propeller Type Certificate. There may also be later approved hub designs that are interchangeable, such as a HC-A2V20-2. Such interchangeability is approved by the Propeller Type Certificate when the older design is replaced by the later. If the later design is specified in the aircraft TC the older design may not be substituted.
- (2) Parentheses shown in the model designations in this or other Hartzell Propeller Inc. publications indicate letter(s) and/or number(s) that may or may not be present because of different configurations permitted on the various aircraft installations. Definitions of propeller model designations and further details of letters that may be present are shown in the Introduction chapter of this manual.

**D. Propeller Diameter**

- (1) The diameter listed is normally the diameter range specified in the Type Certificate Data Sheet. Many applications, such as STC installations, often do not specify a diameter reduction to allow repairs. In the absence of a minimum diameter, it must be assumed that no diameter reduction is allowed.

**E. Spinners**

- (1) Many applications, such as Cessna and Piper, do not always use Hartzell Propeller Inc. spinners with Hartzell Propeller Inc. propellers and often use spinners of their own manufacture (Non-HPI Spinner). This may be listed in the aircraft Type Certificate. Also many STC, experimental, or home built aircraft used spinners of other manufacture or modified existing ones. Where the spinner is not listed, the exact model is unknown to Hartzell Propeller Inc. and the aircraft manufacturer or STC holder should be contacted for additional information.

**F. Governors**

- (1) Hartzell Propeller Inc. governor models are listed in the Hartzell Propeller Inc. Approved Items when their use is known. Hartzell Propeller Inc. only produces reciprocating engine governors. Turbine engine governors are normally manufactured by Woodward. Other governors may be listed by their manufacturer and model number for reference, or just manufacturer when the model number is unknown (Non-HPI Governor). When blank, the governor used in that application is either not manufactured by Hartzell Propeller Inc. or is unknown. Often the aircraft TC will list the governor and if not, the aircraft manufacturer should be consulted for further information.
- (2) A Supplemental Type Certificate does not always specify the governor model and many STC's that replace propellers of other manufacture with Hartzell Propeller Inc. models will use the original governor. The STC holder must be contacted to verify the governor model if it is not listed. Also, experimental or home built aircraft may have a specific engine/governor combination recommended by the manufacturer and combinations other than those recommended by the manufacturer would be unknown to Hartzell Propeller Inc. if not referenced in this section.

## G. Ice Protection Systems

- (1) For ice protection systems supplied by Hartzell, refer to Hartzell Propeller Inc. Ice Protection System Manual 180 (30-61-80).
- (2) For ice protection systems not supplied by Hartzell, refer to the applicable TC or STC holder's Instructions for Continued Airworthiness (ICA).

## H. Application Information Listing

- (1) The pages in this chapter display specific application information pertaining to approved Hartzell Propeller Inc. propeller installations. For ease of use, the data is arranged alphabetically into sections A through Z, according to Aircraft manufacturer name. It is then sorted according to Aircraft Model.

NOTE: Information listed for a given application may be more than one page in length.

## I. Hartzell Propeller Inc. Approved Items

Each installation data sheet contained in this chapter provides a list of Hartzell Propeller Inc. items (parts) that are approved for that specific installation. The following information is displayed in the approved items section:

- **ITEM TYPE:** General description of how a Hartzell Propeller Inc. item is used on an individual installation
- **ITEM NUMBER:** Hartzell Propeller Inc. part number for an item that is approved for an individual installation

NOTE: An asterisk ( \* ) and number to the right of the blade item number are added when there is a difference in paint, de-ice, or counterweight from the "standard" blade configuration. The specific meaning applies only to an individual blade configuration and does not necessarily represent the same change(s) in blade design for other blade models. For specific blade information, refer to the Blade Finish Table in the Paint and Finish chapter of Hartzell Propeller Inc. Standard Practices Manual 202A (61-01-02).

- DESCRIPTION: Detailed description of a Hartzell Propeller Inc. item that is approved for an individual installation
  - NOTE 1: The description "IDS(\*) Item" denotes that an item is not a current production item and may not be available for purchase. If the item is available for purchase, additional manufacturing lead time may be required. Contact Hartzell Propeller Inc. for more information.
  - NOTE 2: The description in this field may also contain a prefix "PCP:", which identifies the approved item as a Propeller Critical Part. Refer to the Introduction Chapter of this manual for information about Propeller Critical Parts. Note that Propeller Critical Parts shown in this manual is not a complete or comprehensive list of Hartzell Propeller Inc. Critical Parts.
- QUANTITY: Quantity of the item that is required per assembly or subassembly for an individual installation
- QTY PER: Designates the assembly or subassembly for which the quantity of the Hartzell Propeller Inc. approved item applies
- COMMENTS: Additional information that pertains to an individual Hartzell Propeller Inc. approved item

## 2. Blade Configuration Information

### A. Important Information

- (1) The Blade Configuration chapter that was previously contained in this manual has been relocated. Refer to the Paint and Finish chapter of Hartzell Propeller Inc. Standard Practices Manual 202A (61-01-02) for blade paint finish schemes.
- (2) For de-ice and anti-ice boot location information, refer to the Hartzell Propeller Inc. Propeller Ice Protection System Manual 180 (30-61-80) - Available on the Hartzell Propeller Inc. website at [www.hartzellprop.com](http://www.hartzellprop.com).

### 3. Spinner Assembly and Spinner Mounting Kit Information

#### A. Spinner Assembly

- (1) For metal spinner assembly information, refer to Hartzell Propeller Inc. Metal Spinner Maintenance Manual 127 (61-16-27).
- (2) For composite spinner assembly information, refer to Hartzell Propeller Inc. Composite Spinner Maintenance Manual 148 (61-16-48).

#### B. Spinner Mounting Kits

- (1) For spinner mounting kit information, refer to the Spinner Mounting Kits chapter of this manual.

### AERO COMMANDER

**Model:** 690, 690A, 690B  
**Trade Name:** TURBO COMMANDER  
**Aircraft T.C./STC:** STC-SA1464NM  
**Propeller Model:** HC-B3TN-5FL  
**Propeller T.C.:** P15EA  
**Blade Model(s):** LT10673-2Q  
 LT10673B-2Q  
 LT10673N-2Q  
 LT10673NB-2Q

**Prop Diameter:** 104.0"

#### Prop Setup:

**Ref. Radius:** 30  
**Reverse Angle:** -8.0 +-0.5  
**Low Pitch Angle:** NA  
**Stud Protrusion**

**IDS No.:** 1362      **Rev.:** 2      **IC Date:** 01/27/2020

**Modifier:** AERO AIR  
**Engine Model:** TPE331-10T-512K, -515K, -516K  
**Power:** 717 HP @ 1607 RPM  
**Placard/Restr:**

**Notes:** Inactive for new production - See IDS #2789.

**Startlock Angle:** 2.5 +-0.2  
**Feather/High Angle:** 90.0 +-0.5  
**Cwt Angle:** Positive

#### Non-HPI Items:

**Non-HPI Spinner:**

**Non-HPI Governor:**

### AEROSTAR AIRCRAFT

**Model:** PA-60-601  
**Trade Name:** AEROSTAR  
**Aircraft T.C./STC:** SA1658NM  
**Propeller Model:** HC-C3YR-2LUF  
**Propeller T.C.:** P25EA  
**Blade Model(s):** FJC8468DB-14\*1  
**Prop Diameter:** 72"

**IDS No.:** 2518      **Rev.:** 1      **IC Date:** 07/15/2015

**Modifier:** MACHEN INC.  
**Engine Model:** LTIO-540-U2A  
**Power:** 350 HP @ 2500 RPM  
**Placard/Restr:**

**Notes:** Special Instructions: Install (1 ea.) B-3852-6-0 Tie Strap per blade IAW BFG 92-018. Boots and Tie Straps only installed.

#### Prop Setup:

**Ref. Radius:** 30  
**Reverse Angle:** NA  
**Low Pitch Angle:** 18.0 +/-0.1  
**Stud Protrusion**

**Startlock Angle:** 23.5 +/-1.5

**Feather/High Angle:** 77.9 +/-0.5

**Cwt Angle:**

#### Non-HPI Items:

**Non-HPI Spinner:**

**Non-HPI Governor:**

#### Hartzell Approved Items:

AEROSTAR AIRCRAFT CORP.

**Model:** PA-60-600, 601, 601P, 602P

**Trade Name:** AEROSTAR

**Aircraft T.C./STC:** STC-SA4156NM

**Propeller Model:** HC-C3YR-2UF

**Propeller T.C.:** P25EA

**Blade Model(s):** FC6660D  
FC6660DB

**Prop Diameter:** 68.25" TO 67"

### Prop Setup:

**Ref. Radius:** 30

**Reverse Angle:** NA

**Low Pitch Angle:** 19.5 +-0.2

**Stud Protrusion**

### Non-HPI Items:

**Non-HPI Spinner:**

**IDS No.:** 887      **Rev.:** -      **DM Date:** 10/01/1992

**Modifier:** MERLYN PRODUCTS

**Engine Model:** IO-540-S1A5, -AA1A5

**Power:** 350 HP @ 2500 RPM

**Placard/Restr:**

**Notes:**

**Startlock Angle:** 25.0 +-1.5

**Feather/High Angle:** 75.5 +-0.5

**Cwt Angle:**

**Non-HPI Governor:**

### AIR TRACTOR

IDS No.: 1078      Rev.: 2      D      Date: 06/04/2013

**Model:** AT-402A  
**Trade Name:** AIR TRACTOR  
**Aircraft T.C./STC:** A17SW  
**Propeller Model:** HC-B3TN-3D  
**Propeller T.C.:** P15EA  
**Blade Model(s):** T10282+4  
                           T10282N+4  
                           T10282NS+4  
                           T10282S+4  
**Prop Diameter:** 106.5" TO 102.0"

**Modifier:**  
**Engine Model:** PT6A-11, -11AG, -20, -20A, -20B, -21  
**Power:** 550 HP @ 2200 RPM  
**Placard/Restr:**

**Notes:** At the low pitch setting, check blade to blade angles at the 30, 42 and 48 inch radial locations. No blade may be consistently high or low at all three stations.

**Prop Setup:**

**Ref. Radius:** 30  
**Reverse Angle:** -8.0 +-0.5  
**Low Pitch Angle:** 18.0 +-0.1  
**Stud Protrusion**

**Startlock Angle:** NA  
**Feather/High Angle:** 87.0 +-1.0  
**Cwt Angle:** Positive

**Non-HPI Items:**

**Non-HPI Spinner:**

**Non-HPI Governor:**

**Hartzell Approved Items:**

### AIR TRACTOR

**Model:** AT-502A  
**Trade Name:** AIR TRACTOR  
**Aircraft T.C./STC:** A17SW  
**Propeller Model:** HC-B5MP-3C  
**Propeller T.C.:** P44GL  
**Blade Model(s):** M10876ANS  
M10876AS  
**Prop Diameter:** 111.2" TO 110.7"

**IDS No.:** 1059      **Rev.:** 2      **D**      **Date:** 01/10/2011

**Modifier:**  
**Engine Model:** PT6A-45R, 45A, -45B  
**Power:** 1100 HP @ 1700 RPM  
**Placard/Restr:** Min A/C gross weight = 4940 lbs  
**Notes:** At the low pitch setting, check blade to blade angles at the 36, 42, 48 and 54 inch radial locations. No blade may be consistently high or low at all four stations and all blades must be within 0.2 deg of one another.

#### Prop Setup:

**Ref. Radius:** 42  
**Reverse Angle:** -11.0 +-0.5  
**Low Pitch Angle:** 16.5 +-0.1  
**Stud Protrusion**

**Startlock Angle:** NA  
**Feather/High Angle:** 79.0 +-0.5  
**Cwt Angle:** Positive

#### Non-HPI Items:

**Non-HPI Spinner:**

**Non-HPI Governor:**

#### Hartzell Approved Items:

IDS No.: 1064 Rev.: 4 IC Date: 01/27/2020

**Model:** AN-38  
**Trade Name:**  
**Aircraft T.C./STC:** Unknown  
**Propeller Model:** HC-B5MA-5A  
**Propeller T.C.:** P44GL

**Modifier:**  
**Engine Model:** TPE331-14GR  
**Power:** 1500 HP @ 1552 RPM  
**Placard/Restr:** A) Stabilized ground operation is prohibited below 1008 (65%) RPM and between 1086 (70%) and 1195 (77%) RPM. B) The engine may be operated in a static ground idle condition only between 65% and 70% RPM and all taxiing and ground operations must be conducted above 77% RPM. C) Aircraft bank angles in excess of 30 degrees are prohibited during normal operation.

**Blade Model(s):** M11276NK-3  
**Prop Diameter:** 112.2"

**Notes:** Refer to Manual 139 for Airworthiness Limitations.

**Prop Setup:**

**Ref. Radius:** 42  
**Reverse Angle:** -15.0 +-0.5  
**Low Pitch Angle:** NA  
**Stud Protrusion**

**Startlock Angle:** -3.4 +-0.1  
**Feather/High Angle:** 82.0 +-0.5  
**Cwt Angle:** 2.5 +-1.5

AYRES

IDS No.: 124 Rev.: 4 IC Date: 11/15/2016

**Model:** S-2R-T65, S-2R-T45 (see note)  
**Trade Name:** TURBO THRUSH  
**Aircraft T.C./STC:** A4SW  
**Propeller Model:** HC-B5MP-3C  
**Propeller T.C.:** P44GL

**Modifier:**  
**Engine Model:** PT6A-65AG, see note for optional engine

**Power:** 1230 HP @ 1700 RPM

**Placard/Restr:** See 8110-3 dated July 5, 1995 for restrictions.

**Blade Model(s):** M10876ANS  
M10876AS  
**Prop Diameter:** 111.2" TO 110.7"

**Notes:** Blades are shot peened from 7" thru 30" station. S-2R-T45 uses engine PT6A-45, -45A, -45B, -45R all rated at 1173 HP

**Prop Setup:**

**Ref. Radius:** 42  
**Reverse Angle:** -11.0 +-0.5  
**Low Pitch Angle:** 11.5 +-0.1

**Startlock Angle:** NA  
**Feather/High Angle:** 79.0 +-0.5

**Cwt Angle:** 2.5 +-1.0

**Stud Protrusion**

**Non-HPI Items:**

**Non-HPI Spinner:**

**Non-HPI Governor:**

**Hartzell Approved Items:**

## APPLICATION GUIDE

159

**BEECH**

**IDS No.:** 3413      **Rev.:** 1      **IC Date:** 05/10/2017

**Model:** 200, 200C, B200, B200C  
**Trade Name:** SUPER KING AIR (s/n BT35+ & BN5+)  
**Aircraft T.C./STC:** SA02715CH-D  
**Propeller Model:** HC-E4N-3G  
**Propeller T.C.:** P10NE

**Modifier:** Standard Aero  
**Engine Model:** PT6A-52

**Power:** 850 HP @ 2000 RPM  
**Placard/Restr:** Stabilized ground operation is prohibited between 500 and 1180 RPM. The propeller may be operated when feathered at or below 500 RPM.

**Blade Model(s):** D9390S-1R  
 D9390SK-1R  
**Prop Diameter:** 93.0" TO 92.0"

**Notes:** At the low pitch setting, check blade to blade angles at the 36 and 42" radial locations. All blades must be within 0.3 degree of one another. Low pitch angle is approximate. Refer to Raytheon maintenance instructions for on-wing adjustment procedures; De-Ice kits 102282-1 & 67-890-1 are identical. Per Beech request to keep prop item P/N same for B200GT as the B200 series on this IDS, the 102282-1 de-ice kit will be used for all 200 series.

**Prop Setup:**

**Ref. Radius:** 30  
**Reverse Angle:** -11.0 +-0.5  
**Low Pitch Angle:** 18.2 +-0.1  
**Stud Protrusion**

**Startlock Angle:** NA  
**Feather/High Angle:** 85.8 +-0.5  
**Cwt Angle:**

**Non-HPI Items:**

**Non-HPI Spinner:**

**Non-HPI Governor:**

### BEECH

**Model:** 33,35,36 SERIES (SEE NOTES)  
**Trade Name:** BONANZA  
**Aircraft T.C./STC:** SA01668CH  
**Propeller Model:** PHC-C3YF-1RF  
**Propeller T.C.:** P25EA  
**Blade Model(s):** F8068  
**Prop Diameter:** 82" TO 78"

**IDS No.:** 2499      **Rev.:** 3      **IC Date:** 03/18/2016

**Modifier:** D'SHANNON PRODUCTS

**Engine Model:** IO-550-B

**Power:** 300 HP @ 2700 RPM

**Placard/Restr:**

**Notes:** Limited to the following aircraft with STC  
 SA2200SW: (A-V)35; V35(A,B); 35-33; 35-  
 (A-C)33; 35-C33A; (E-G)33; (E,F)33(A,C);  
 36; A36; (A,B)36TC.

#### Prop Setup:

**Ref. Radius:** 30  
**Reverse Angle:**  
**Low Pitch Angle:** 12.5 +-0.1  
**Stud Protrusion** 1.450 +- .030

**Startlock Angle:**

**Feather/High Angle:** 36.0 +-1.0

**Cwt Angle:**

#### Non-HPI Items:

**Non-HPI Spinner:**

**Non-HPI Governor:**

#### Hartzell Approved Items:

## APPLICATION GUIDE 159

**BEECH**

**Model:** A36  
**Trade Name:** STARFIRE BONANZA  
**Aircraft T.C./STC:** STC-SA1835SO  
**Propeller Model:** HC-C4YF-1E  
**Propeller T.C.:** P52GL

**Blade Model(s):** F7063Q  
**Prop Diameter:** 73.75" NO CUT OFF

**Prop Setup:**

**Ref. Radius:** 30  
**Reverse Angle:** NA  
**Low Pitch Angle:** 13.5 +-0.1  
**Stud Protrusion** 1.450 +-0.030

**Non-HPI Items:**

**Non-HPI Spinner:**

**IDS No.:** 185      **Rev.:** 1      **IC**    **Date:** 07/15/2015

**Modifier:** COLEMILL  
**Engine Model:** IO-550-B  
**Power:** 300 HP @ 2700 RPM  
**Placard/Restr:** Avoid continuous ground operation between 2250 and 2450 RPM. Recommend pre-flight propeller cycling at 1600 RPM or below.  
**Notes:** B-2984-4 flange spacer needed with this propeller.

**Startlock Angle:** NA  
**Feather/High Angle:** 35.0 +-1.0  
**Cwt Angle:**

**Non-HPI Governor:** WOODWARD

**Hartzell Approved Items:**

## APPLICATION GUIDE 159

**BEECH**

IDS No.: 2624      Rev.: 3      IC Date: 07/15/2015

**Model:** E90  
**Trade Name:** KING AIR  
**Aircraft T.C./STC:** 3A20  
**Propeller Model:** HC-B3TN-3(B,M)  
**Propeller T.C.:** P15EA  
**Blade Model(s):** T10173NB-8  
                           T10173NE-8  
                           T10173NK-8  
**Prop Diameter:** 93.5" TO 90 3/8"

**Modifier:**  
**Engine Model:** PT6A-28  
**Power:** 550 HP @ 2200 RPM  
**Placard/Restr:**  
**Notes:** ("K" de-ice applies to certain aircraft serial nos.; see aircraft TCDS for applicability). Fit one A-3044 Carbon Block Assembly per customer request; Low pitch angle is approximate. Refer to Raytheon maintenance instructions for on-wing adjustment procedures.

**Prop Setup:**

**Ref. Radius:** 30  
**Reverse Angle:** -11.0 +/-0.5  
**Low Pitch Angle:** 20.2 +/-0.2  
**Stud Protrusion**

**Startlock Angle:** NA  
**Feather/High Angle:** 87.0 +/-0.5  
**Cwt Angle:** Positive

**Non-HPI Items:**

**Non-HPI Spinner:**

**Non-HPI Governor:**

**Hartzell Approved Items:**

## APPLICATION GUIDE

159

**BEECH**

**IDS No.:** 1075      **Rev.:** 9      **IC Date:** 07/26/2022

**Model:** B200, B200C, B200T, B200CT  
**Trade Name:** SUPER KING AIR (s/n BT35+ & BN5+)  
**Aircraft T.C./STC:** A24CE  
**Propeller Model:** HC-E4N-3G  
**Propeller T.C.:** P10NE

**Modifier:**  
**Engine Model:** PT6A-42

**Power:** 850 HP @ 2000 RPM  
**Placard/Restr:** Stabilized ground operation is prohibited between 500 and 1180 RPM. The propeller may be operated when feathered at or below 500 RPM.

**Blade Model(s):** D9390S-1R  
 D9390SK-1R  
 D9390SK-1R\*2  
**Prop Diameter:** 93.0" TO 92.0"

**Notes:** At the low pitch setting, check blade to blade angles at the 36 and 42" radial locations. All blades must be within 0.3 degree of one another. Low pitch angle is approximate. Refer to Raytheon maintenance instructions for on-wing adjustment procedures; De-Ice kits 102282-1 & 67-890-1 are identical. Per Beech request to keep prop item P/N same for B200GT as the B200 series on this IDS, the 102282-1 de-ice kit will be used for all 200 series.

**Prop Setup:**

**Ref. Radius:** 30  
**Reverse Angle:** -11.0 +-0.5  
**Low Pitch Angle:** 18.2 +-0.1  
**Stud Protrusion**

**Startlock Angle:** NA  
**Feather/High Angle:** 85.8 +-0.5  
**Cwt Angle:**

**Non-HPI Items:**

**Non-HPI Spinner:**

**Non-HPI Governor:**

BEECH

IDS No.: 278 Rev.: 4 IC Date: 09/26/2017

**Model:** 300, 300LW  
**Trade Name:** SUPER KING AIR  
**Aircraft T.C./STC:** A24CE  
**Propeller Model:** HC-B4MP-3B  
**Propeller T.C.:** P56GL

**Modifier:**  
**Engine Model:** PT6A-60A  
**Power:** 1050 HP @ 1700 RPM  
**Placard/Restr:** Stabilized ground operation below 1050 RPM is prohibited except when propeller is feathered, operation at or below 400 RPM is permissible.

**Blade Model(s):** M10476  
M10476K  
M10476K\*1  
M10476NS  
M10476NSK  
M10476NSK\*1  
M10476SK\*1

**Notes:** Low Pitch Angle is approximate. Refer to Raytheon maintenance instructions for on-wing adjustment procedures.

**Prop Diameter:** 105.0" TO 104.0"

**Prop Setup:**

**Ref. Radius:** 42  
**Reverse Angle:** -14.0 +/-0.5  
**Low Pitch Angle:** 18.0 +/-0.1

**Startlock Angle:** NA  
**Feather/High Angle:** 79.5 +/-0.5  
**Cwt Angle:** Positive

**Stud Protrusion**

**Non-HPI Items:**

**Non-HPI Spinner:**

**Non-HPI Governor:** WOODWARD

**Hartzell Approved Items:**

**BEECH**

IDS No.: 1705 Rev.: 4 IC Date: 08/14/2015

**Model:** 1900D  
**Trade Name:** AIRLINER  
**Aircraft T.C./STC:** A24CE  
**Propeller Model:** HC-E4A-3J  
**Propeller T.C.:** P10NE  
  
**Blade Model(s):** E10950PCB  
E10950PCK  
**Prop Diameter:** 110.0" NO CUT OFF

**Modifier:**  
**Engine Model:** PT6A-67D  
**Power:** 1279 HP @ 1700 RPM  
**Placard/Restr:** Stabilized ground operation is prohibited between 400 and 950 RPM and between 1250 and 1395 RPM.  
  
**Notes:** 67-680-6 is improved low watt density system; Latest configuration is HC-E4A-3J/E10950PCB (DEC. '03); Low pitch angle is approximate. Refer to Raytheon maintenance instructions for on-wing adjustment procedures. Refer to Manual 147 for Airworthiness Limitations.

### Prop Setup:

**Ref. Radius:** 42  
**Reverse Angle:** -14.5 +-0.5  
**Low Pitch Angle:** 18.6 +-0.1  
**Stud Protrusion**

**Startlock Angle:** NA  
**Feather/High Angle:** 79.0 +-0.5  
**Cwt Angle:**

### Non-HPI Items:

**Non-HPI Spinner:**

**Non-HPI Governor:**

### Hartzell Approved Items:

IDS No.: 349 Rev.: 1 IC Date: 07/07/2015

**Model:** 172I, K, L, M, N  
**Trade Name:** SKYHAWK  
**Aircraft T.C./STC:** STC-SA647CE  
**Propeller Model:** HC-C2YR-1B(F)  
**Propeller T.C.:** P-920

**Modifier:** ROBERT WILLIAMS (AVCON)  
**Engine Model:** O-360-A1A  
**Power:** 180 HP @ 2700 RPM  
**Placard/Restr:** Avoid continuous operation between 2000 and 2250 RPM

**Blade Model(s):** F7666A-2  
**Prop Diameter:** 76.0" TO 72.5"

**Notes:** STC permits use of Non-F pitch change knob configuration. All new manufactured propellers will be 1BF/F configuration.

### Prop Setup:

**Ref. Radius:** 30  
**Reverse Angle:** NA  
**Low Pitch Angle:** 14.0 +-0.2  
**Stud Protrusion**

**Startlock Angle:** NA  
**Feather/High Angle:** 29.0 +-2.0  
**Cwt Angle:**

### Non-HPI Items:

**Non-HPI Spinner:**

**Non-HPI Governor:**

### Hartzell Approved Items:

CESSNA

IDS No.: 3137 Rev.: 6 IC Date: 07/16/2015

**Model:** R182, TR182, FR182, T182  
**Trade Name:** SKYLANE RG, TURBO SKYLANE  
**Aircraft T.C./STC:** SA03078CH  
**Propeller Model:** HC-I3YR-1RF  
**Propeller T.C.:** P33EA  
**Blade Model(s):** F8068\*4  
 F8068B\*3  
**Prop Diameter:** 82" - 78"

**Modifier:** Hartzell Propeller  
**Engine Model:** O-540-J3C5D, O-540-L3C5D+turbo  
**Power:** 235 HP @ 2400 RPM  
**Placard/Restr:** None

**Notes:** De-iced propeller installation is limited to aircraft with a previously installed 3-blade propeller equipped with existing electro-thermal de-ice.

### Prop Setup:

**Ref. Radius:** 30  
**Reverse Angle:**  
**Low Pitch Angle:** 14.0 +/- 0.2  
**Stud Protrusion**

**Startlock Angle:**  
**Feather/High Angle:** 32.0 +/- 1.0  
**Cwt Angle:**

### Non-HPI Items:

**Non-HPI Spinner:**

**Non-HPI Governor:**

## APPLICATION GUIDE 159

CESSNA

IDS No.: 2985 Rev.: 2 IC Date: 07/16/2015

**Model:** ( )206( ) See Notes  
**Trade Name:** Super Skywagon, Stationair, Turbo Stationai  
**Aircraft T.C./STC:** SA02821CH  
**Propeller Model:** HC-C3YF-1RF  
**Propeller T.C.:** P25EA  
**Blade Model(s):** F7693DF+2\*1  
**Prop Diameter:** 80"- 78"

**Modifier:** Hartzell Propeller  
**Engine Model:** IO-550-F

**Power:** 300 HP @ 2700 RPM

**Placard/Restr:**

**Notes:** This installation data sheet is limited to aircraft that have been converted by Texas Skyways STC No. SA10010SC Atlantic Aero SA00332AT, Wipair SA1482GL

A-

2295-1(P) Eligible on SA00332AT & SA1482GL, A-2476-30 Eligible on SA00332AT & SA1482GL

### Prop Setup:

**Ref. Radius:** 30  
**Reverse Angle:**  
**Low Pitch Angle:** 12.8 + - 0.1  
**Stud Protrusion** 1.450 + - .030

**Startlock Angle:**  
**Feather/High Angle:** 32.0 + - 1.0  
**Cwt Angle:**

### Non-HPI Items:

**Non-HPI Spinner:**

**Non-HPI Governor:**
